OUR CATALOG FOR 1926

It has been our purpose to make this book valuable to you, not only for the brief descriptions and prices it contains, but because of other information which we have gathered from various sources and now put before you. If, because of this catalog, your garden is more colorful, your house more of a home or even if your table is graced with more luscious vegetables of your own growing, our effort will not have been in vain.

Should you receive two copies of this catalog, kindly hand one to some acquaintance who might be interested in gardening. As long as the supply lasts we will mail a copy free to anyone on request.

We have added a number of new varieties not carried before, but if you desire some item which you do not find listed, we will be glad to procure it for you if it comes within the realm of seeds, bulbs, plants or garden accessories. Your helpful suggestions will be appreciated and we will take pleasure in answering questions related to gardens when sent to us by mail.

MAIL ORDERS should bear the name and complete address of sender, written plainly.

Where shipping point is different from mail address, explicit directions should be given to avoid delay. We prepay postage on all packets, ounces, half-pounds and pounds. Larger quantities will be forwarded at buyer's expense.

WE DELIVER heavy parcels of seed, bulbs or fertilizer to any part of the city.

NON-WARRANTY. There are so many elements entering into the success or failure of crops, such as soil, weather and cultural methods that, in common with all reputable seed houses, we give no warranty, expressed or implied, as to description, purity, productiveness, or any other matter of any seeds, bulbs or plants we send out, and we will not be responsible in any way for the crop.

HARDY PERENNIAL PLANTS

What is more beautiful than a well-planned border of hardy plants? With colors so varied that any scheme may be worked out, the average gardener may have flowers from early spring until the killing frosts of November. Under this head come plants, which once established, need little or no attention from one year to another. Naturally, they will respond to good treatment and the true flower-lover will study their habits and needs so as to better supply such cultivation, fertilizing, pruning or mulching which they may need.

Most of the perennials may be planted either in spring or fall. When planted early in the spring they will bloom the first year, and will continue to bloom for many seasons with very little care. In arranging borders, it is well to note, height, blooming season and color.

AQUILEGIA—(Columbine) Comes in blues, yellows, and shades of rose and pink.

THE LAWN

MAKING A NEW LAWN—Much care should be taken in the preparation of the soil surrounding the home as the beauty of the lawn for many years will depend largely upon the nature of the soil from which the grass draws its nourishment. Top-soil should be removed before grading and replaced as a top-dressing before sowing seed. A liberal application of well rotted compost with bone meal or Wizard Sheep Manure will furnish the proper plant food. Blue Grass seed should not be sown alone as it is very slow in making a "stand," but should be mixed with some other grass of quicker growth to shield the young Blue Grass from summer sun and wintery frost.

SOWING THE SEED—This should be done on a still, dry day, first raking the surface down so as to form a perfect seed-bed. Divide the seed to be sown into two equal parts. Scatter the seed as evenly as possible on the lawn, walking north and south in the distribution of half the seed, then sow the remaining half by walking east and west—thus "checking" to assure even distribution. After sowing the seed rake lightly or firm the seed with a lawn roller.

RENOVATING AN OLD LAWN—Apply Wizard sheep manure at the rate of six or eight pounds to each 100 square feet. Scatter some grass seed over thin places, raking the ground before and after sowing. Where the soil is sandy or heavy

clay, a top dressing of humus will be found beneficial as it furnishes a moisture-retaining mulch and is high in nitrogen, an essential grass food. If the soil is damp and sour, hydrated lime or ground limestone will correct the acidity and promote plant growth.

LAWN FERTILIZERS—We highly recommend the use of Wizard Sheep Manure, especially when used in conjunction with Bone Meal. Either one of these fertilizers is safe and when applied judiciously will give very pleasing results. Bone Meal may be applied to the lawn at the rate of two pounds to each 100 square feet. Wizard Sheep Manure may be applied at the rate of six to ten pounds to the 100 square feet. If you are skeptical about the claims which are made for Wizard, use five pounds on a test plot in your yard. Lime is very beneficial to soil which has become sour—but don't spoil the appearance of your yard because your neighbor does—it is not a fertilizer.

ABOUT WATERING—Remember that a good soaking once a week is better than sprinkling every day. Teach the roots to go deeply into the soil. Too much watering makes the soil sour.

CUTTING THE GRASS—This should be done on a cloudy day or late in the afternoon—never on a hot, sunny day. This should be borne in mind especially in the treatment of young grass.
